

① James is the computing teacher at a girl's only school. While the students agree that he teaches well, some are dissatisfied and feel that the content itself is boring and that they would like to be able to learn while having fun.

After receiving similar feedback from this year's students about the way the subject is being taught, James decides that he needs to find a way to solve the problem before it gets out of hand. He promises to do something about it.

③ After being shown a quick demo of the app by Mich, James decides that it could be the solution to his problem. So they both agree to bring the matter to the Head Teacher and possibly purchase a license for Hach-Cess. Upon approval, a trial contract deal is made where the software is tried for a few weeks. If found satisfactory, a permanent contract is guaranteed. (The app is being used to supplement the lessons)

A week after the trial started:

So girls it has been a week now since you started using the app. How does it feel? Still find the subject boring? :D

OMG this is like the best thing ever. There are so many achievements, I will keep me busy for a while.

There are so many achievement points to collect. It feels like we are being rewarded everything we get a notification.

Now that I am having fun learning about coding, I can wait to start actual coding!

Now I understand what exactly a variable is!

I was wrong, this app makes coding as easy as it gets.

I like how help is readily available even with the free version.

One of the major benefits of Hach-Cess is its business model. The free version that anyone can download has 15 questionnaires and up to 1000 achievement points, with help available for each questionnaire.
