was unfair that they had to study a subject that was clearly just for boys.

Mick knew that there was nothing that he could say to change her mind so he thought of doing some research on the internet and typed in the words "My daughter hates coding" on google. He was immediately presented with a list of options and the very first one was about an app called "Hack-cess" which according to the subtitle was an app designed specifically to teach young girls coding in a fun and creative way. James went on the company's facebook page and after reading an overwhelming amount of positive reviews, decided to give it a try. He downloaded the free version on his daughter's phone and after witnessing how quickly Anne's attitude on the subject changed and how she praised the app, he knew he made the right move and proceeded to purchase the full version. Anne is now able to better follow the lessons and she can simply go through the app to refresh her memory.

When James told Mick about the issue he was having Mick immediately knew the solution to the problem and he enthusiastically described the app and its advantages as he had seen the results firsthand. It turns out he was right to suggest its implementation in the teaching as soon after adopting Hack-cess, the feedback at the school has been strongly positive. Students
